

AMPC Fully Funded POC

Data Analytics Proof of Concept

The modern challenge in operation reporting

Over the years, the meat processing industry has seen significant technological advancements. This technology provides a vast range of valued information on operation performance, but many plants struggle with the complexity of manually extracting and transforming information into valued insights. Due to this challenge, many plants are missing out on optimising their production outputs in the most cost-efficient way.

Toustone and AMPC: The opportunity to test out Business Intelligence

AMPC has recognised the complexity of this industry challenge and is working with Toustone to fully fund data analytic Proof of Concept (POC) projects. With funding from AMPC, processing plants have the opportunity to see how a tailored Business Intelligence solution can benefit their business performance.

Whether it's reporting on production, energy, staff retention, or something else, you have the opportunity to test out Business Intelligence in your business.

Key benefits

- Reduction in the manual reporting process
- Decision-making based on accurate, up-to-date data
- Improved data security, governance, and accessibility
- Refined procedures to maximise production
- Better management of staff and an overall reduction in labour costs
- Enhanced efficiencies and improved KPI performance
